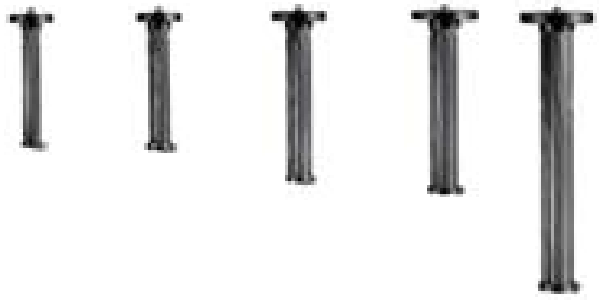
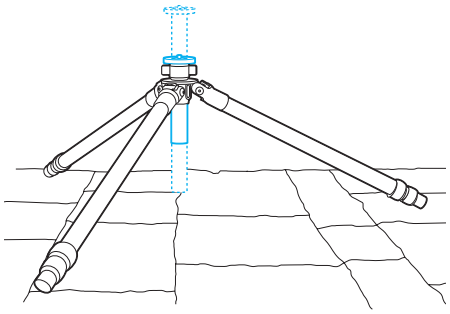
accessories

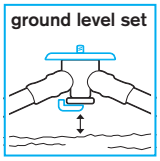
low level kits

These low level column kits are of intermediate length between the standard center columns supplied with tripods and the very short columns previously supplied as separate accessories. Their lengths are defined to achieve the lowest shooting angle with legs not extended but opened to the widest angle. Column kits are in Carbon 6X tube and also incorporate the components for the Gitzo Ground Level Set: machined aluminum Safe Lock upper disc, new reversible screw and new retractable hook. This is the most convenient way to update previous carbon fiber, basalt and aluminum Gitzo tripods with the Ground Level Set feature.

GS0510KB GS1510KB GS2510KB GS3510KB GS5510KB







All short column kits include the Ground Level Set (aluminum Safe Lock disc, screw and hook assembly).

G1586B3 **location shoe**

Set of 3 shoes for aluminum and carbon fiber tripods.

G1220.130B **big foot series 2, 3**
G1410.130B **big foot series 4, 5**
G1220.130B3 **big feet series 2, 3**
G1410.130B3 **big feet series 4, 5**

All terrain vibration absorbing foot for mud, snow or sandy surfaces.
For monopods series 2, 3 G1220.130B.
For monopods series 4, 5 G1410.130B.
Set of 3 feet for tripod series 2, 3 G1220.130B3
Set of 3 feet for tripod series 4, 5 G1410.130B3

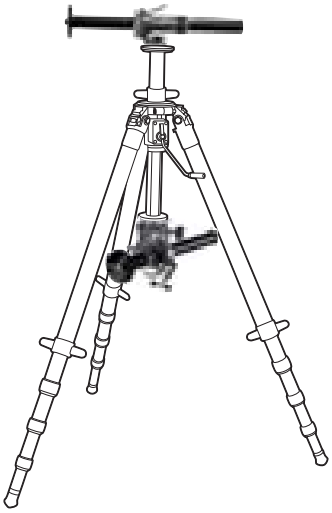
column adapter for additional disc

These adapters let you fit a head or accessory (bracket, lateral arm etc.) to the bottom of the center column without reversing it and thus without removing the top head and equipment. Adapters come with the new solid aluminum Safe Lock disk in different diameters and the new 1/4" – 3/8" reversible screw.
GS1120D for tripods series 1
GS2120D for tripods series 2
GS5120D for tripods series 3, 4 and 5

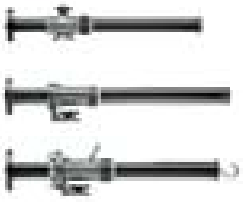
GS1120D GS2120D GS5120D

lateral arms

Lateral arms enable cameras to be positioned above or below the tripod apex in positions which might otherwise be obstructed by the tripod legs. Both Rapid (Sliding) and Geared versions are available. For optimum rigidity, make sure to select a lateral arm with the same diameter as the tripod's upper section.



G530
G532
G535



G535 geared lateral arm, and G541 right angle bracket with center column used same as a lateral arm.

quick release plates

Gitzo quick release plates come in three different profiles (A, B and C).
Each profile is offered in different lengths (short or square, medium and long) and with different features (graduated, anti rotation pin) and attachments (1/4" - 3/8"). Please refer to the table below for head and quick release compatibility. Originally-supplied plates are indicated as “standard”, those marked with a dot are additional separate accessories.

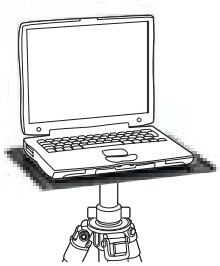
G1539
double platform

Enables cameras (or 2 heads) to be fitted - 35cm (14”) apart center to center - to a single tripod column. Suitable for 35mm or medium format cameras.



G065
laptop & monitor platform

33 x 40cm (13" x 15.7") platform will attach to all Gitzo tripods.

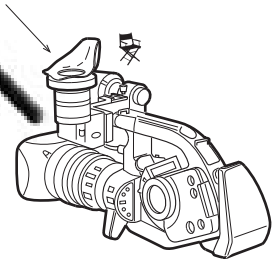
suggested combinations

Because Gitzo builds supports for professional and advanced enthusiast photographers who have their own individual requirements of their camera support and prefer to create their own specific combination of tripod and head, we don't include pre-assembled kits in our range.
Nevertheless, there are some tripod and head combinations that have become very popular - setting a standard among birdwatchers, video, and photographic professionals.
This section illustrates a few of the most successful combinations, but of course we always suggest you look for the ideal head and tripod combination for your own style and needs.
Heads and tripods are matched together by Series number (for example Series 2 heads are perfect for Series 2 tripods).

For some applications or personal preferences, you can match a lower Series head with a higher Series tripod (for example a Series 1 head with a Series 2 tripod).

GT3540L Series 3 Carbon 6X tripod (page 23) and G1378M Series 3 center ball head (page 37)

GT2941L Series 2 basalt tripod (page 25) and G1278M Series 2 center ball head (page 37)



GT3530LSV Series 3 carbon 6X video tripod (page 30) and G1380 Series 3 professional video head (page 45)

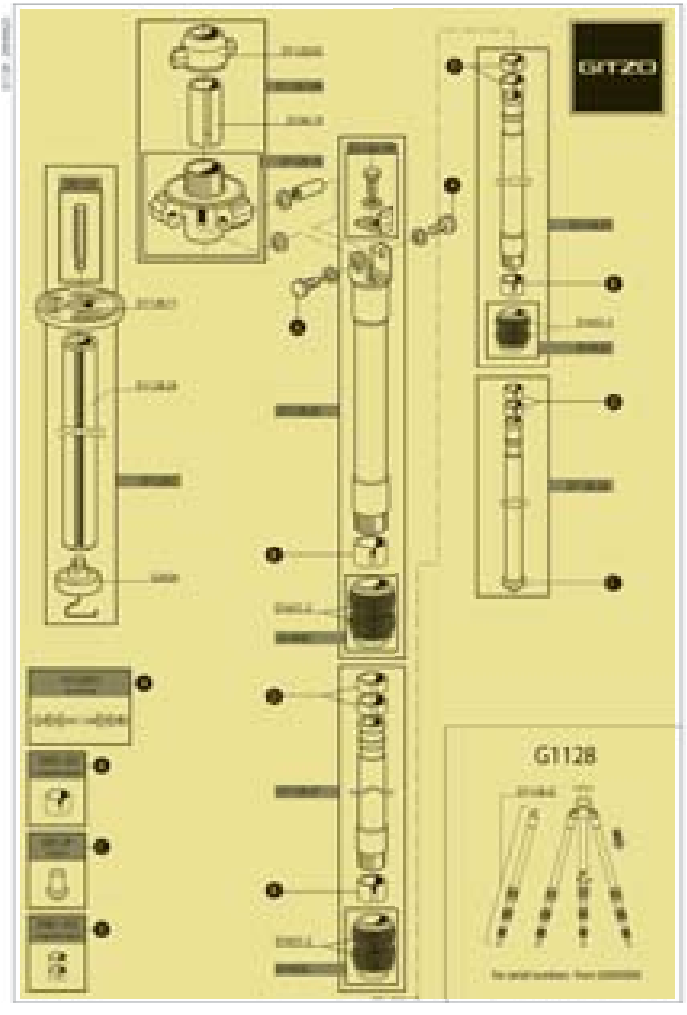
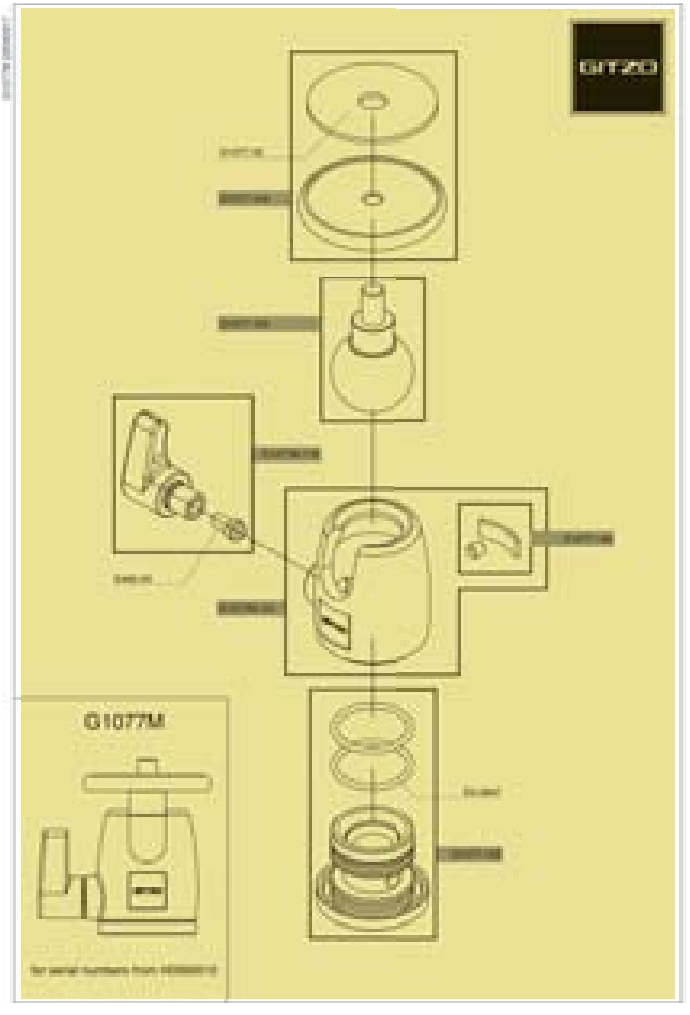
spare parts

Spare parts for Gitzo products are available for years... we can often still repair tripods that are as much as 25 years old.

All products keep the same traditional tube diameters and many parts are built to be backward compatible with older ones.

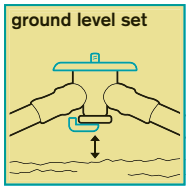
On **www.gitzo.com** you can find exploded views of Gitzo products with spare parts reference numbers.





features

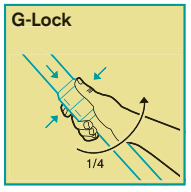
tripods



ground level set

This new feature allows you to remove the center column to save weight and get the camera closer to the ground. Uses existing components: the upper disc with reversible 1/4 - 3/8 bolt and the column hook assembly: Remove column and fix the disk directly to the upper casting using the column hook. No tools needed.

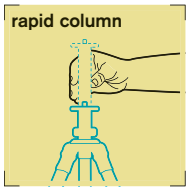
(See page 6)



G-Lock

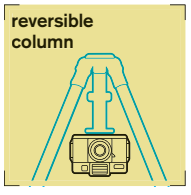
G-Lock is the new Gitzo leg locking system. The locking mechanism has been completely redesigned in order to achieve a 20% increase in rigidity, faster operation and stronger, safer locking. G-Lock's special design also provides a "gravity lock" effect: the higher the load applied vertically to the leg, the stronger the lock.

(See page 7)



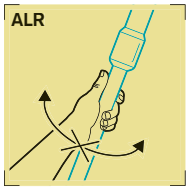
rapid column

The center column locking collar above the tripod shoulder makes it easier to adjust the column quickly. Series 1 and above are built with an anti-rotation grooved center column for improved stability.



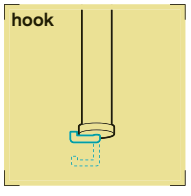
reversible column

The rapid column can easily be inverted for an alternative shooting angle or low level macro work.



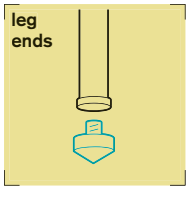
ALR

We have introduced a new Anti Leg Rotation system, which means the tripod can be opened in less than 15 seconds. Simply loosen all the twist locks on each leg at the same time, then pull the leg down and tighten the locks individually.



hook

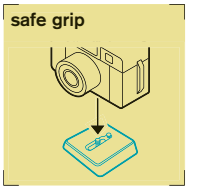
This built-in accessory allows you to hang a stabilizing weight (e.g. a full camera bag or a sand/water bag) from the bottom of the tripod center column. Useful with long heavy lenses, uneven ground or in windy conditions. The hook can hold up to 18 kg (39.7lb).



leg ends

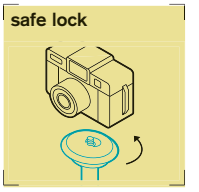
Most tripods and monopods in Series 1 and above are provided with removable rubber feet. This feature allows you to easily change worn out rubber feet or to fit other accessories, such as spiked feet or snow/sand shoes. (4 sections tripods in Series 1 are excluded because the final leg section is too narrow to fit these ends).

heads



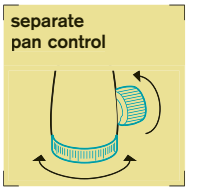
safe grip

Safe Grip is a material that gives a safer lock between your camera and the head plate, preventing the camera from moving or slipping. It is used on quick release plates and in applications where the camera equipment is screwed to the support to reduce pivoting and twisting.



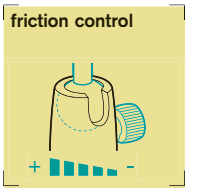
safe lock

Safe Lock is a special techno polymer that maximizes locking torque and equipment stabilisation. It is used on the upper discs of tripods and heads, and in applications where the equipment is rotated and screwed onto the support to eliminate micro movements and vibration.



separate pan control

When using a ball head, the ability to lock and unlock the panoramic movement independent of front-back or lateral tilt movements is convenient for panoramic photography and when a high level of control is required.

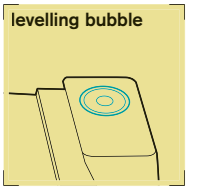


friction control

By fine tuning the freedom of movement of the head, friction control makes the head slower and more precise or faster and looser. This feature also helps to make using heavy equipment or long lenses safer. On ball and fluid head models without separate friction controls, slowly adjusting the lock knobs gives similar results.

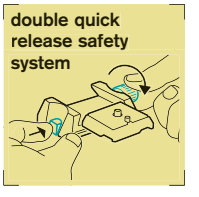
reversible handles

Handles can be removed and repositioned or rotated in different positions. This feature greatly increases a head's versatility and is particularly appreciated by left handed users.



levelling bubble

The levelling bubble helps you to get your photographs, film or scope viewing perfectly horizontal or vertical. Gitzo's production staff set all levelling bubbles by hand in order to ensure 100% accurate level indication.



double quick release safety system

The system consists of two pins, one fixed and one manually operated by means of a button, that prevent camera equipment from suddenly dropping out of the head when the quick release locking knob is released. Extremely useful with heavy equipment, long lenses and spotting scopes.
